How often do you reset your phone. How do you reset your phone password. How do you reset your phone to factory. How do you reset your phone if you forgot your password. How do you reset your phone to factory settings. How do you reset your phone without losing everything. How do you reset your phone completely. How do you reset your phone when you forgot your password.

To remove all data from your phone, you can reset your phone to factory settings. Factory resets are also called "formatting" or "hard resets." Get ready to factory reset Important: A factory reset erases all your data from your phone. If you're resetting to fix an issue, we recommend first trying other solutions. Learn how to troubleshoot Android issues. Know Google Account username & password To restore your data after you reset your phone, you must enter security info. When you enter the info, it shows that you or someone you trust did the reset. Be sure that you know a Google Account on the phone. Be sure that you know the password for the Google Account on the phone. To confirm, sign in to that account on another device or computer. If you don't remember the password, get sign-in help. If you've set a screen lock, be sure that you know your phone's PIN, pattern, or password. If you can't unlock your phone, learn what you can do. Tip: If you recently reset your Google Account password, wait 24 hours before you perform a factory reset. Back up your data to your Google Account A factory data reset erases your data from the phone. While data stored in your Google Account can be restored, all apps and their data will be uninstalled. To be ready to restore your data, make sure that it's in your Google Account. Learn how to back up your data. Charge & connect A factory reset can take up to an hour. Charge your phone to at least 70%. Connect your phone to Wi-Fi or your mobile network. When the factory reset completes, you must be connected to sign in to your Google Account. Factory reset your phone On most phones, you can reset your phone through the Settings app. If you can't open your phone's Settings app, you can try factory resetting your phone using its power and volume buttons. We recommend checking your manufacturer's support site for device-specific instructions. Related resources Get answers from community experts 1 Open your device's Settings. It's often a gear-shaped icon (⚙) or an icon containing a series of slider bars. 2 Scroll down and tap Backup & reset. It's in either the Personal or Privacy section of the menu, depending on device and Android version. If you are on a Samsung Galaxy device, instead tap General Management and then tap Reset. Advertisement 3 Tap Factory data reset. It's at the bottom of the menu. 4 Tap Reset Phone. Once the reset process is complete, your phone will be formatted as it was when it left the factory. If you are on a Samsung Galaxy device, instead tap Reset. 5 Enter your screen lock passcode. If your phone has a screen lock enabled, you will be asked to enter your phone's pattern, PIN, or passcode. 6 Tap Erase everything to confirm. This will immediately erase all of the phone's data and reboots to the factory default settings and configuration. The process can take several minutes. If you are on a Samsung Galaxy device, instead tap Delete All. Advertisement 1 Power off your device. 2 Boot your phone in Recovery Mode. Press and hold the device-specific button combination while your phone is powered off. The buttons vary from device to device.[1] Nexus devices - Volume Up, Volume Down, and Power Samsung devices - Volume Up, Home, and Power Moto X - Volume Down, Home, and Power Other devices generally use Volume Up and Power. Some devices with physical user interfaces may use the Power and Home buttons. 3 Scroll to Wipe data/factory reset. Use the volume buttons to scroll through the menu options. 4 Press the Power button. This selects the reset option. 5 Scroll to Yes. This confirms your selection. 6 Press the Power button. This starts the reset process and reformats your Android device to its factory settings. Advertisement Add New Question Question What can I do if my phone will not turn on? If it's stuck on the logo screen, then it could be that your phone is soft-bricked. To restore your phone, search for your model online, then flash stock firmware. Question I only want to save my photos. How can I save them and do a factory reset? If your phone has an SD card slot, you can copy your photos to an SD card. Data on an SD card is not touched during a factory reset. If you can't use an SD card, you can always plug your phone into your computer and transfer your photos to it over USB. Finally, there's cloud storage. If you upload all your photos to Google Photos, Facebook, or Dropbox before doing a factory reset, they will be safely stored online for later download. Question How can I use the software of my Android phone if it is corrupted? You can't, you can't use corrupted software. Re-download the software or find alternatives. When you operate your phone, it stores bits of data from the apps and features you use to help them run more smoothly. Over time, this data can pile up and cause multiple issues on your phone, including running slowly and becoming unresponsive. Sometimes freeing up space on your phone will help, but often, clearing the data by resetting your phone is the best way to address the problem There are two types of reset, a soft reset and a hard reset. To perform a soft reset, you power off your phone and turn it back on. Restarting your phone closes all the processes and apps running on your phone and loads all the system files from scratch. A soft reset does not come with the risk of losing your data. The second type of reset is a hard reset, also known as a factory reset. A factory reset removes all the files stored on your Android phone, including your data, and brings the condition of your device back to how it was when it left the factory. But if you follow these steps carefully, you can perform a factory reset your Android phone without losing your data. 1. Back up your authenticator app Two-factor authentication adds an extra layer of security to your accounts by requiring you to provide a one-time passcode in addition to your password. If you use an authenticator app to generate those one-time passcodes, you need to back it up separate from your phone backup. Most authenticator apps have the option to backup to the cloud, including Microsoft Authenticator (see how), Authy (see how), Duo Mobile (see how), and LastPass Authenticator (see how). Google Authenticator does not have a cloud backup option. Instead, you can create QR Codes that house your account information. Here's how: Open the Google Authenticator app. Select "More" (the triple dots). Select "Transfer accounts." Select "Export accounts." Select an account you want to restore to your phone. Take a screenshot of the QR Code. Repeat steps 5 and 6 for each account, and make sure you have the screenshots of the QR codes safely backed up. You'll be doing a complete phone backup in the next step, but I recommend saving an extra copy. 2. Back up your phone The only way to keep your data when doing a factory reset is to back it up and restore it when the reset is complete. Google's built-in backup feature is the easiest way to back up your data. Open Settings. Select "Google." Select "Backup." If you have backed up your phone before, you will see a list of what's backed up. If everything is backed up or if this is the first time you're backing up to Google, proceed to the next step. If you don't see everything being backed up, open the Google One app and select "Storage." Then select "View details." Now you can select "Manage backup" to select the data you want backed up. Select "Back up now." If this is your first backup, you will be able to select what you want backed up. Note that it can take up to 24 hours to back up your data for the first time. When your data is saved, you'll see "On" below all of the data types you selected for backup. Now that you have created a backup of your data let us check out the steps to factory reset your smartphone. 3. Perform a factory reset If you own an Android smartphone running plain Android, you can follow the steps below (steps may vary slightly depending on the manufacturer and version of Android). Open Settings. Scroll down and select "System." Expand the "Advanced" option. (For some manufacturers, you may see a reset option here. If you see a reset option, select it and go to step 5.) Select "Reset options." Select "Erase all data" (for some manufacturers you may see factory reset). On the confirmation page, select "Reset Phone." Another confirmation screen will show up, and you need to select "Erase everything." You will be asked to confirm your pattern. That's it. If you own a Samsung phone, follow the steps below. If you have encrypted the microSD card, you must decrypt it before resetting the phone. Otherwise, your phone will not be able to read the data on the card. From Settings, search for and select "Decrypt SD card," and then follow the on-screen prompts. Open Settings. Select "General management." Select "Factory data reset." You will see a list of the data and accounts that will be removed from your phone after the reset. Scroll down and select "Reset." If your phone is protected by a pattern or PIN code, you will be asked to re-enter it. Select "Delete All." Your phone will start the reset process and will boot up once the process is completed. Now that you have factory reset your phone, the next step is to set up your phone and restore your data. 4. Restore your data When you set up your device again, you'll be able to restore your data from the backup you just created. Select "Copy apps & data." Connect to your WiFi network. On the "Bring your data from" screen, select "A Backup from an Android phone." When prompted, log into the Google account you used to create your backup. Select the backup you just created to restore your data. Select the apps you want to restore. Follow the prompts to finish setting up your phone. The apps and data will be restored in the background.
